

regulation of mRNA stability	regulation of RNA stability	negative regulation of glycolytic process		cellular response to zinc ion	cellular response to copper ion	negative regulation of gene expression, epigenetic		regulation of mRNA metabolic process	regulation of mRNA catabolic process
negative regulation of nucleotide catabolic process	negative regulation of catabolic process	mRNA catabolic process		cellular response to zinc ion		negative regulation of gene expression, epigenetic		regulation of mRNA metabolic process	
negative regulation of purine nucleotide catabolic process	RNA catabolic process	mRNA stabilization	negative regulation of mRNA catabolic process	stress response to copper ion	response to copper ion	regulation of chromatin organization		nuclear-transcribed mRNA poly(A) tail shortening	positive regulation of miRNA metabolic process
				response to zinc ion	response to zinc ion			positive regulation of mRNA catabolic process	

sensory organ development	heart development	lung development	peptidyl-serine modification	peptidyl-serine phosphorylation	nucleosome organization		tissue morphogenesis	tissue morphogenesis	cell surface receptor protein
sensory organ development			peptidyl-serine modification				tissue morphogenesis		tyrosine kinase signaling pathway
thyroid gland development	gland development	eye development			protein-DNA complex organization		cartilage development	connective tissue development	

respiratory system development	embryo development ending in birth or egg hatching	embryonic skeletal system morphogenesis	dense core granule cytoskeletal transport	dense core granule transport	postsynaptic specialization organization	postsynaptic specialization assembly	calcium ion transport into cytosol		positive regulation of microtubule polymerization
respiratory system development			dense core granule transport		postsynaptic organization	postsynaptic assembly	regulation of calcium ion transport into cytosol		microtubule polymerization or depolymerization
embryonic morphogenesis	embryonic organ development	embryonic development	dense core granule localization	dense core granule localization	intracellular glucose homeostasis	intracellular glucose homeostasis	negative regulation of translation		ossification

development		development		dense granule		intracellular glucose homeostasis		negative regulation		regulation of growth		ossification	
embryonic morphogenesis		embryonic organ development		pattern specification process		localization		intracellular glucose homeostasis		translation			
Bergmann glial cell differentiation				neuron migration		insulin receptor signaling pathway		protein transport along microtubule retrograde axonal transport		detoxification of inorganic compound		regulation of cellular response to growth factor stimulus	
Schwann cell development		regulation of neuron projection development		response to nitrogen compound		cellular response to peptide		microtubule-based protein transport		inositol phosphate metabolic process		face development
