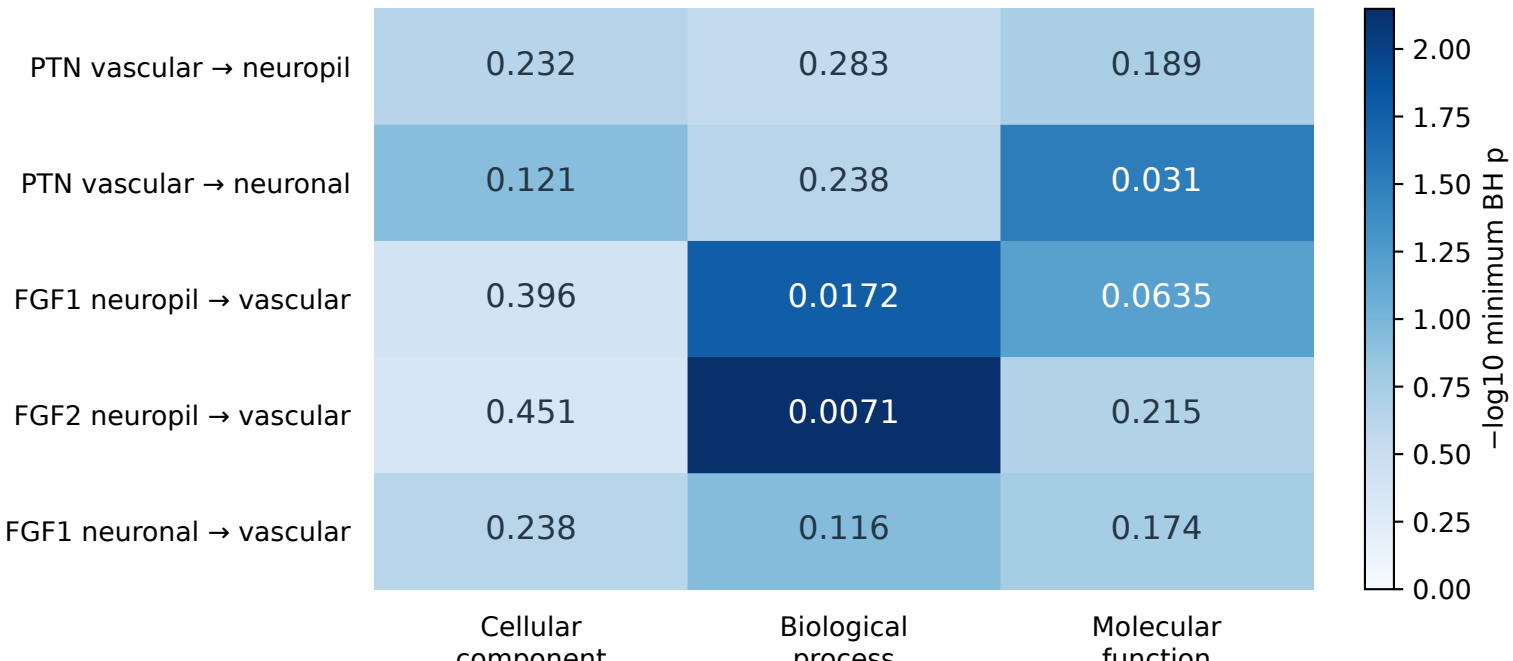
C GO enrichment across nominal mediation screens

11 screen/ontology–term associations pass BH-adjusted p < 0.05.

Cells show the smallest GO BH-adjusted p in each testing family.



Background: all tested outcome genes in each target microenvironment.
Hypergeometric tests; inherited GO annotations; eligible term sizes 10–500 background genes.
BH correction within each screen/ontology; 4,560 term tests in total. Values are adjusted p-values.
