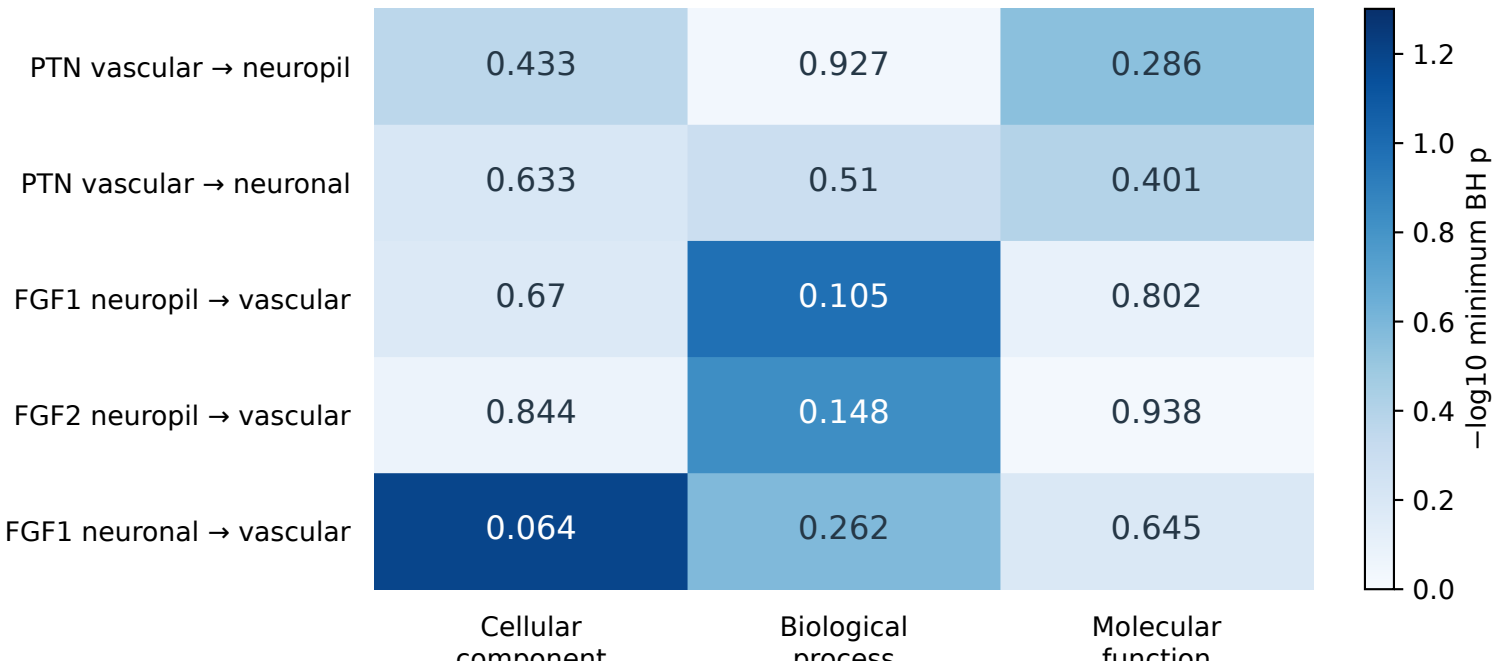
C GO enrichment across nominal mediation screens

No terms pass BH-adjusted p < 0.05 in any screen or ontology.

Cells show the smallest GO BH-adjusted p in each testing family.



Background: outcome genes passing manuscript and matched-baseline diagnosis p < 0.05 in that screen.
Hypergeometric tests; inherited GO annotations; eligible term sizes 10–500 background genes.
BH correction within each screen/ontology; 3,143 term tests in total. Values are adjusted p-values.
