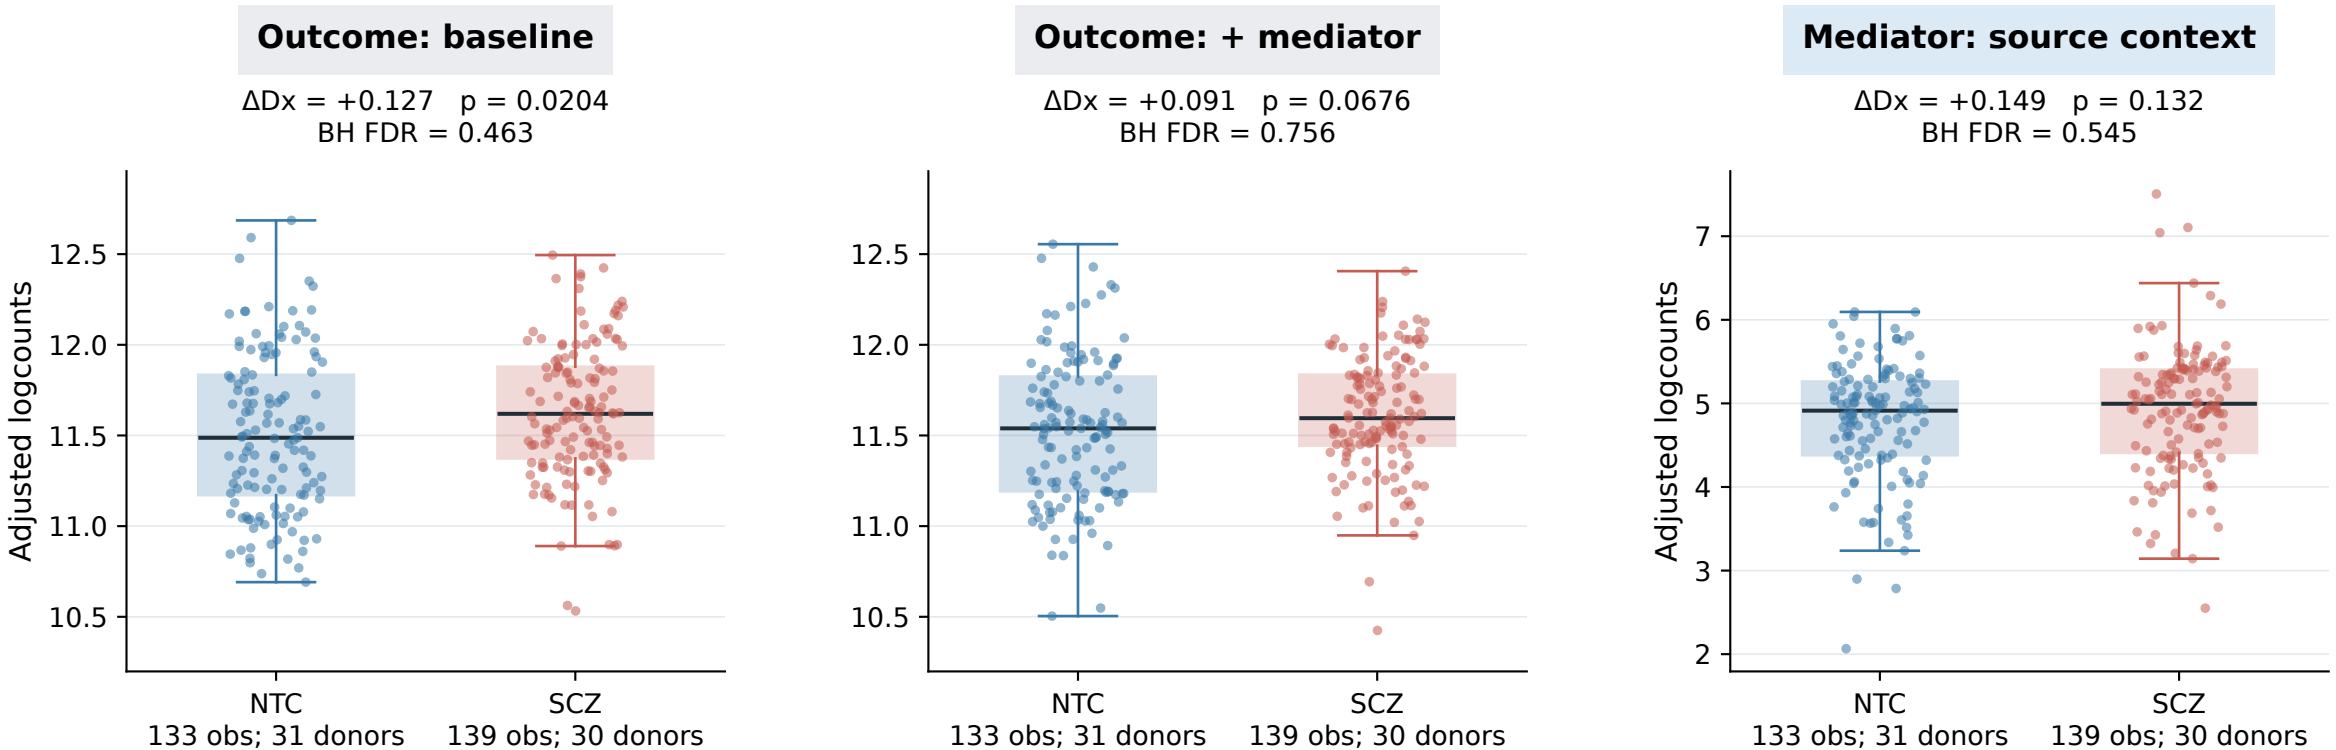
# MT3 [vascular] | FGF2 [neuropil]

Matched donor–SpD observations · 61 donors · 272 observations

fgf2_neuropil_vasc | ENSG00000087250 | Nominal screening candidate



Conditional FGF2–MT3 association: b = +0.229 per mediator SD, p = 5.9e-14, BH FDR = 7.15e-12 | Dx attenuation = 28.8%

Values remove centered age, sex and SpD effects; middle panel also removes the centered mediator effect.

ΔDx = SCZ − NTC. P-values/FDR are from the original donor-blocked limma fits; boxes supply no new statistical tests.

Each point is a donor–SpD observation; multiple points from one donor are not independent. Shared outcome y-axis.

Selection: Representative of MT1G/MT1M/MT3-driven metal-response GO terms in the all-tested-background analysis, matching the manuscript vascular metal-homeostasis theme. Include both FGF1 and FGF2 pairs for comparison.
